Program Type

The Certificate of Training in Obesity Interventions for Adults program is a training program, not a certification program. Upon completion of the program, a participant is not awarded a designation or credential. Please note individuals who complete the certificate of training are not certified. The term certification should only be used when referencing the completion of a certification examination such as the Registration Examination for Dietitians. Definitions of a certificate program and a certification program are:

Certificate Program:

A certificate program is an intensive training program with a component that assesses the participant. Upon completion of the program, participants receive a certificate attesting to the attainment of a new knowledge/skill set (e.g., Academy/CDR Certificate Program in Obesity Interventions for Adults). Unlike a certification program, participants do not receive a professional designation. Individuals completing a Certificate program receive CPEUs for training and assessment time regardless of whether they pass the post-course assessment and receive the certificate.

Certification Program:

A process, often voluntary, by which individuals who have demonstrated the level of knowledge and skill required in the profession, occupation, role, or skill are identified to the public and other stakeholders.
